Sauer System’s new folding rod system includes folding arms, rods, and all installation and mounting hardware. Installation can be done in-house by maintenance crews.

**Decreased Setup Time**
Our system doesn’t require mallets or other tools to adjust rods between setups. Integrated indexed scales increase repeatability and accuracy while reducing operator frustration.

**Increased Machine Speed**
The flexible folding arms allow the folding rods to be set in the optimal position to achieve the best fold possible. This flexibility allows the machine to be run at higher speeds without compromising fold quality.

**Reduced jam-ups, waste, and machine down time**
The folding rod system features an internal attachment mechanism that eliminates 'catch points' for boxes running through the folder.
