Sauer System Rule Installation machines feature a cast iron cylinder mounted in bearings, set in a channel iron frame.

Machines can simulate virtually any size die cylinder and include special features such as horizontal or vertical channels, ejector pin holes, and threaded inserts for die mounting.
Features & Benefits

- Can simulate virtually any size die cylinder.
- Cylinder diameters and grid patterns meet OEM specifications but can be modified for your application.
- Can be customized to meet the needs of your floor plan.
- Cast iron cylinder reduces noise during knife installation.
- Proprietary braking system allows cylinder to be locked in position.
Options

- Threaded inserts (versus tapped holes)
- Heavy duty caster kit
- Multiple grid patterns in one cylinder
- Customer selected paint color for the frame
