

Sauer System T-SLOT HEADS AND ANVILS

Sauer System T-Slot heads and anvils, known throughout the industry as “Sauer Heads” or “Attachment Heads”, allow for a flexible system of rotary die cutting on printer-slotters and flexo folder-glueers. **Common applications include** hand holes, vent holes, tear tape cuts, and five panel folders. Custom aluminum dies are also available, and T-Slot heads can be used to hold wood dies.

Anvil

Typical Hand Hole Setup

Most T-Slot heads are made from aircraft grade aluminum, making installation and removal easy. T-Slot heads are index stamped to match existing slotter heads on the shaft for quick set-up of holders. Sauer System anvils are also made from aluminum and come in a variety of widths. They can butt flush against one another to create a wider anvil surface and with numerous width combinations available, there is virtually no limitation due to size restrictions.

Quick set-ups are assured by Sauer System's Kam-Lok mechanism, which provides easy installation, removal, and re-positioning of the heads. Heads can be installed or removed in a matter of minutes and loosened for re-positioning on the shaft with a simple quarter turn of a locking screw.

A VARIETY OF ALUMINUM HOLDERS ARE AVAILABLE. Examples include:

Horizontal Hand Hole Holder

Triangle Cut Holder

Tear Tape Holder

We are happy to act as your applications department and recommend tooling based on your needs. **Call us today to see how Sauer die cutting equipment can help make your project a reality.**
